Summary

Java Backend Developer experienced in building RESTful APIs using Spring Boot, Hibernate, and MySQL. Strong foundation in OOP, Data Structures, and backend architecture. Skilled in designing scalable applications, writing clean and maintainable code, and solving real-world problems through project-based learning, with projects available on GitHub.

Technical Skills

Languages: Java, SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs

Security: Spring Security, JWT

Database: MySQL, Oracle SQL

Core Concepts: OOP, Collections, Exception Handling, Multithreading, Java 8 (Streams, Lambda)

DSA: Arrays, Strings, Linked Lists, Stacks, Queues, Hashing, Sorting, Searching

Tools: Git, GitHub, Maven, STS, Postman, Swagger/OpenAPI

Others: Basic Docker, Logging (SLF4J/Logback)

Professional Experience

- **Backend Developer (Project-Based Learning)** Jan 2024 – Present
Self-Initiated Projects
 - Developed and implemented 10+ RESTful API endpoints using Java, Spring Boot, Hibernate, and MySQL.
 - Implemented validation, global exception handling, and API documentation using Swagger, improving API reliability.
 - Tested 20+ API endpoints using Postman to ensure proper functionality and error handling.
 - Applied DSA concepts such as HashMap and sorting to optimize search and filtering performance.
 - Worked with SQL queries, joins, and schema design for efficient data handling.
 - Designed clean and maintainable APIs following REST principles and naming conventions.
 - Improved API response efficiency by optimizing data structures and query handling.
 - Reduced development time by implementing reusable service layer components.

Projects

- **Online Quiz Application** Java, Spring Boot, Hibernate, MySQL, Thymeleaf
GitHub: github.com/Vikasgabale9/QuizApp
 - Developed a full-stack MCQ-based quiz application with question display, answer submission, and score calculation.
 - Used Spring Boot MVC architecture with Controller, Service, and Repository layers.
 - Implemented JPA/Hibernate for efficient database interaction.
- **Smart Lost & Found System** Java, Spring Boot, Spring Data JPA, MySQL
GitHub: github.com/Vikasgabale9/lostfound-tracker
 - Built REST APIs for managing lost and found items with CRUD operations.
 - Implemented search, filtering, and item tracking using optimized data structures.
 - Integrated Swagger documentation and global exception handling.
- **Personal Portfolio Website** HTML, CSS, JavaScript
Live: vikasgabale9.github.io/Portfolio — GitHub: github.com/Vikasgabale9/Portfolio
 - Designed a responsive portfolio website to effectively showcase technical skills and development work.
 - Implemented smooth navigation and interactive UI components.

Achievements

- Solved 150+ DSA problems on LeetCode and HackerRank.
- Actively participated in hackathons and coding quizzes on Unstop platform.
- Collaborated in team-based hackathons, improving problem-solving and communication skills.
- Built scalable backend applications using layered MVC architecture with Spring Boot.
- TCS NQT: Scored 100% in Programming and 70% overall.

Education

- **B.Sc. Computer Science** 2022 – 2025
Swami Ramanand Teerth Marathwada University, Nanded
